## Temperature Influence

Operating voltages for step excitation. Minimum operating voltage is referred to +20 °C/+68 °F ambient temperature; maximum operating voltage is referred to +40 °C/+104 °F ambient temperature.

t °C	t °F	K1	K2
0	32	0.92	1.15
10	50	0.96	1.12
20	68	1.00	1.09
30	86	1.04	1.05
40	104	1.08	1.00
50	122	1.12	0.94
60	140	1.16	0.88
70	158	1.20	0.81

Values of minimum and maximum operating voltage in respect to ambient temperature (t) may be obtained applying following formulas:

$$V_{\min t} = K1 \cdot V_{\min 20}$$

$$V_{\max t} = K2 \cdot V_{\max 40}$$

## Application Hints

#### Use of sealed relays

The M15 relay types are completely sealed (according to IEC 68 part 2 - 17 {DIN 40046} QC 2 - test). They are flux proof and are suited for automated soldering (wave soldering) as well as for immersion washing. If maximum utilization of the switching capacity is required, it is recommended to open the relay after completion of the soldering/washing process by breaking out the corresponding pin as indicated.

#### Product safety

Operations outside the stated ratings shown in this catalogue may result in a possible failure or unsafe operating conditions.
